

# Alfa Laval LeviMag® UltraPure

# Levitated Magnetic Mixer

#### Introduction

The Alfa Laval LeviMag® UltraPure is an aseptic magnetic mixer that uses a patented levitating impeller and advanced design to mix down to the last drop and maximize product yield.

Compact, energy-efficient and easy to maintain, it provides dry-running capabilities and efficient mixing at low speeds, which ensures gentle product treatment, as well as at high speeds for high-intensity mixing. This provides greater process flexibility to handle a wide range of fluid types and mixing duties.

Its open design and low-speed rotation during cleaning contribute to no dead zones, effective residue removal and minimize contamination risks from wear particles. All this contributes to fast return on investment and maximum product yield in tanks ranging in size between 30 litres and 40,000 litres.

It is supplied with Alfa Laval Q-doc, a comprehensive documentation package that provides full transparency of the entire supply chain and helps make the validation process easy.

#### Applications

Alfa Laval LeviMag UltraPure offers effective mixing for multiple processes, such as those involving serums, vaccines, plasma fractions, bacteria and cell cultures, and APIs, in the biotechnology, pharmaceutical and other industries with demanding sterile or high-purity applications.

## Benefits

- · Maximum process efficiency, minimal product loss
- · Optimal flow with higher efficiency and less energy consumption
- Mixing down to the last drop for maximum yield due to low agitation and dry-running capability
- · Optimized Cleaning-in-Place (CIP) due to full drainability
- Minimized downtime due to ease of maintenance

#### Standard design

The Alfa Laval LeviMag UltraPure consists of a detachable drive unit, levitating impeller unit with radial blades, seals, ceramic bearings and magnetic coupling, weld plate and connections. It is available in five sizes, with mixing speeds ranging from 10 rpm up to 800 rpm.

## Working principle

An impeller with radial blades installed inside the tank rotates due to the torque from the magnetic coupling. The rotation of the impeller mixes the fluid inside the tank. The unique design of the Alfa Laval magnetic coupling ensures the levitation of the impeller at all times. This enables dry-running and complete drainability of process fluids from the tank possible. This ensures highly efficient mixing down to the last drop and, subsequently, maximum yield. It also enables the free flow of CIP liquid and steam around all parts of the mixer, thereby ensuring thorough cleaning. Impeller levitation also eliminates axial wear.

## Available versions

- Impeller with male/female bearing
- Impeller complete, with drive unit
- Impeller prepared for Speed Sensor
- ATEX version (Cat. II -/2G Ex h IIC T4 -/Gb)
- SS 316L as standard, Special Alloys EN 1.4529 or EN 2.4602 available on request.

#### Drive unit versions

- Painted (fan ventilated)
- Clean room finish, Sealed Surface Conversion Treatment (smooth, closed, none fan ventilated)
- Extended console for insulated tanks

## Motor efficiency

- IE4 (standard)
- Premium (CUS for US)

# Safety class

- No requirements (IE4, Premium)
- Eex-de IIC T4 (on ATEX version)
- Class I div.I, group D T4

# Accessories

- Weld plates
- · Speed Sensor
- Inspection & Service tools
- Installation tools

Wiring Diagram

## Documentation:

As standard with UltraPure Q-Doc including:

- Compliance with Regulation (EC) No.: 1935/2004
- Compliance with (Ex/ATEX) directive 2014/34/EU (ATEX option, II -/2G Ex h IIC T4 -/Gb)
- Compliance to the EC Regulation for GMP
- 3.1 Material Certificates acc. to EN10204 (MTR) for all wetted parts
- Compliance to USP Class VI <88> for Zirconia YTZP and FEP/FKM seals
- Compliance to FDA CFR 21 (non-metallic parts) for elastomers, ceramics and gear oil.
- TSE (Transmissible Spongiform Encephalopathy) / ADI (Animal Derivative Ingredient) Declaration
- Surface finish compliance declaration

#### Options:

- · Surface roughness measurements included
- Weld Log included

## Build up:

- Impeller
   Seals
- 3. Female Bearing
- 4. Male Bearing
- 5. Weld Plate
- 6. Clamp ring connection (WP50 only)
- 7. Flange-Bolt Connection (WP81 only)
- 8. Drive unit
- 9. Speed Sensor (Accessory)

# Machine Selection:

LeviMag UltraPure can be sized and configurated in Alfa Laval configurator. Selection of size can also be done by use of the below selection charts. Needed information for selection of size:

- · Media Viscosity
- Tank Volume
- Tank diameter and tank bottom shape.
- Duty (see below Duty Levels)

| Duty Level       | Duty                  | Description  |
|------------------|-----------------------|--|
| 1                | Keep media homogenous | Keeping fluids homogenous & low gradient heat transfer   |
| 0                | Mild blending         | Simple blending of miscible fluids & high gradient heat transfer, no specific request to mixing time, create |
| 2 Mild bleriding |                       | suspension if deposit velocity is below 0.015 m/s  |
| 3                | Mixing                | Mixing of fluids, relative low mixing time, create suspension if deposit velocity is below 0.03 m/s          |
| 4                | Powerful mixing       | Dissolving solids, very low mixing time, create suspension if deposit velocity is below 0.06 m/s.            |

## Preconditions for using the selection charts:

- Specific gravity of the media must be less than or equal to 1.1
- Liquid height must be equal to or lower than 2% times the tank diameter
- The Specific Gravity of the media can maximum be 1.1
- if duty involves suspension of particles (see deposit velocity limits in the duty levels), the tank diameter D must be:

$$D \leq \sqrt[3]{\frac{V*4}{\pi}}$$

where V is the net. Volume.

- If preconditions are not fulfilled please contact Alfa Laval Global Technical Support

## How to select:

- 1. Select duty
- 2. Check preconditions
- 3. Go to the chart for the chosen duty
- 4. Read out the point for the requested tank volume (X-axis) and viscosity (Y-axis)
- 5. Choose the curve to the right from the point
- 6. If physically possible a larger impeller size can always be chosen eg. to obtain a gentler product treatment (operating at lower speed)

Duty Level 1: Keep media homogenous Volume vs. vicosity

Net. Volume [liter]

A: LeviMag size 100 mm B: LeviMag size 150 mm

C: LeviMag size 200, 250 and 300 mm

Duty Level 2: Mild blending Volume vs. vicosity

Net. Volume [liter]

A: LeviMag size 100 mm

B: LeviMag size 150 mm

C: LeviMag size 200, 250 and 300 mm

Duty Level 3: Mixing Volume vs. vicosity

Net. Volume [liter]

A: LeviMag size 100 mm
B: LeviMag size 150 mm
C: LeviMag size 200, 250 mm
D: LeviMag size 300 mm

Duty Level 4: Powerfull mixing Volume vs. vicosity

Net. Volume [liter]

A: LeviMag size 100 mm
B: LeviMag size 150 mm
C: LeviMag size 200, 250 mm
D: LeviMag size 300 mm
